

USER STORY AND REQUIREMENT

Individual track project

NOVEMBER 30, 2020
WONDIMU GEBRE

Contents

1. User stories	2
1.2 User stories that are done in the previous sprints (sprint -1, 2, 3 and sprint -4)	3
1.3 User stories that in progress and that are going to be implemented in the coming sprints.....	4

1. User stories

After I wrote user stories, I go back through and prioritize all user stories using MoSCoW method.

- ☐ As a manager, I would like to see the detail of each entity (Department, Employee, Tasks and Roles) to check their profile and to get their information if needed. Must
- ☐ As a manager, I would like to add a new department, employee, tasks and roles to the system if needed. Must
- ☐ As a manager, I want to update each employee's profile, department detail, roles details and tasks detail. Must
- ☐ As a manager, I would like to retrieve aggregated data from the database, provide statistical analysis for groups of employees and to create useful summary data for business analysis. Must
- ☐ As a manager, I want to retrieve/filter specific data from the database, in order to focus on specific information in a large table of data. Must
- ☐ As a manager, I would like to see the relationship between each entity (employees, departments, tasks, and roles): to assign employees into their department, give a role to each employee and assign tasks for each employee. Must
- ☐ As a manager, I would like to assign a role for each employee. Assigning roles enables all employees to get a better idea of which employees are working on related tasks. All employees can review the to-do-list, I am able to see which employee is completing their assignment and give follow up feedback.
- ☐ As a manager, I would like to give tasks for each employee, depend on their department and profession. Must
- ☐ As a manager, I would like to create new tasks and roles if needed and for each new tasks and roles I will assign employees and put in the department. Must

- ☐ As a manager, I would like to assign each employee into their department. In order to clear all employees, work division and responsibilities, first we need to assign each employee in to their department. Must
- ☐ As manager, I need to login to the system as admin in order to update, delete, add and retrieve data from employees, department, tasks and roles. Must
- ☐ As a manager, I would like to see all overview of ToDoList (Departments, Employees, Tasks and Roles) in the dashboard to check the status of the entities. Should

1.2 User stories that are done in the previous sprints (sprint -1, 2, 3 and sprint -4)
